OPERATION LIFESAVER

Rail Safety

For

Emergency Responders Course

This course is designed to prepare the emergency responder for potential train incidents and the factors that could affect your safe response. Various case scenarios of actual RR incidents will be presented to help recognize on-scene dangers for emergency personnel and their equipment while on or near RR property. Topics to include identification of different types of RR equipment and locomotive components, how to stop a train in an emergency situation and train stopping distances, sources of information at RR incidents, proper locomotive shut down procedures, hazards of bent rail, and familiarization with railroad documentation.

Designed For: All Emergency Response Personnel

Course length: 3 hours

Prerequisite: None

Min / Max # of students: 10 / 70
